COMPACT DISC PLAYER

PD-7500

PD-6500

PD-6500-S

PD-7500, PD-6500 AND PD-6500-S HAVE FOLLOWING VERSIONS:

Type	Applicable model			Power requirement	Export destination
	PD-7500	PD-6500	PD-6500-S		
KU	○	○	—	AC 120V only	U.S.A.
KC	○	○	—	AC 120V only	Canada
HEM	○	○	—	AC 220V, 240V (switchable)*	European continent
HB	○	○	—	AC 220V, 240V (switchable)*	United Kingdom
SD	○	○	—	AC 110V, 120-127V, 220V, 240V (switchable)	Kingdom of Saudi Arabia and general market
HPW	○	○	—	AC 220V, 240V (switchable)*	Australia
HEWM	—	—	○	AC 220V, 240V (switchable)*	European continent

* Change the connection wire from PRIMARY BOARD assembly to TRANS BOARD assembly.

- This manual is applicable to the PD-7500/KU, KC, HEM, HB, SD, HPW, PD-6500/KU, KC, HEM, HB, SD, HPW and PD-6500-S/HEWM types.
- As to the PD-7500/KC, HEM, HB, SD, HPW, PD-6500/KC, HEM, HB, SD, HPW and PD-6500-S/HEWM types, refer to page 92-95.
- The PD-6500-S is the same as the PD-6500 except for color.
- Ce manuel pour le service comprend les explications de réglage en français.
- Este manual de servicio trata del método de ajuste escrito en español.

MO MAY 1990 Printed in Japan

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

1. SAFETY INFORMATION

(FOR U.S.A. MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

(FOR EUROPEAN MODEL ONLY)

IMPORTANT

THIS PIONEER APPARATUS CONTAINS
LASER OF HIGHER CLASS THAN 1.
SERVICING OPERATION OF THE APPARATUS
SHOULD BE DONE BY A SPECIALLY
INSTRUCTED PERSON.

LASER DIODE CHARACTERISTICS

MAXIMUM OUTPUT POWER: 5 mw
WAVELENGTH: 780-785 nm

LABEL CHECK (SINGLE type)

HEM and HB types

Additional Laser Caution

1. Laser Interlock Mechanism

The position of the switch (S601) for detecting
loading completion is detected by the system
microprocessor, and the design prevents laser diode
oscillation when the switch (S601) is not in CLMP
terminal side (when the mechanism is not clamped
and CLMP signal is high level).

Thus, the interlock will no longer function if the
switch (S601) is deliberately set to CLMP terminal
side (if CLMP signal is low level).

In the test mode*, the interlock mechanism will not
function.

Laser diode oscillation will continue if pin 10 of
TAB137N (IC1) is connected to pin 11 or ground, or
pin 12 is connected to high level (ON) or the
terminals of Q1 is shorted to each other (fault
condition).

2. When the cover is opened, close viewing of the
objective lens with the naked eye will cause exposure
to a Class 1 or higher laser beam.

* Refer to page 45.

2. EXPLODED VIEW AND PARTS LIST

2.1 EXTERIOR

NOTES:

- Parts without part number cannot be supplied.
- The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
- Parts marked by "◎" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

Mark	No.	Part No.	Description	Mark	No.	Part No.	Description
\triangle	1	CM-22C	Strain relief		101		Under base
\triangle	2	PDG1015	AC power cord		102		Rear base
\triangle	3	PTT1132	Power transformer (AC120V) (For PD-7500 type)		103		P.C.B. angle
\triangle	3	PTT1128	Power transformer (AC120V) (For PD-6500 type)		104		Switch angle
					105		P.C.B. spacer

	34				
	35				
	36				
◎	37	PWZ1795	Function board assembly				

- The stopper consists of the big ring part and the small ring part.
If you stick the stopper to the leg, stick the big ring part to the front leg, and the small ring part to the rear leg.

Front panel assembly for PD-6500 type

NOTE:

- Front panel assembly (No. 30) consists of aluminum panel and name plate (110).
- Function panel (No. 17) is not included.
- [Hatched area] indicates function panel (No. 17).

PD-7500 type only

NOTE:
Filter (No. 16) is located between aluminum panel and function panel (No. 17).

	36	PMZ20P030FMC	Screw				
	37	PEA1085	D.C. motor assembly (SPINDLE: For PD-7500)				
D	37	PEA1028	D.C. motor assembly (SPINDLE: For PD-6500)				

• How to install the disc table

- 1 Use nippers or other tool to cut the two sections marked \textcircled{A} in figure 1. Then remove the spacer.
- 2 While supporting the spindle motor shaft with the stopper, put spacer on top of the motor base (angled so it doesn't touch section \textcircled{B}), and stick the disc table on top (takes about 9kg pressure)

3. PACKING

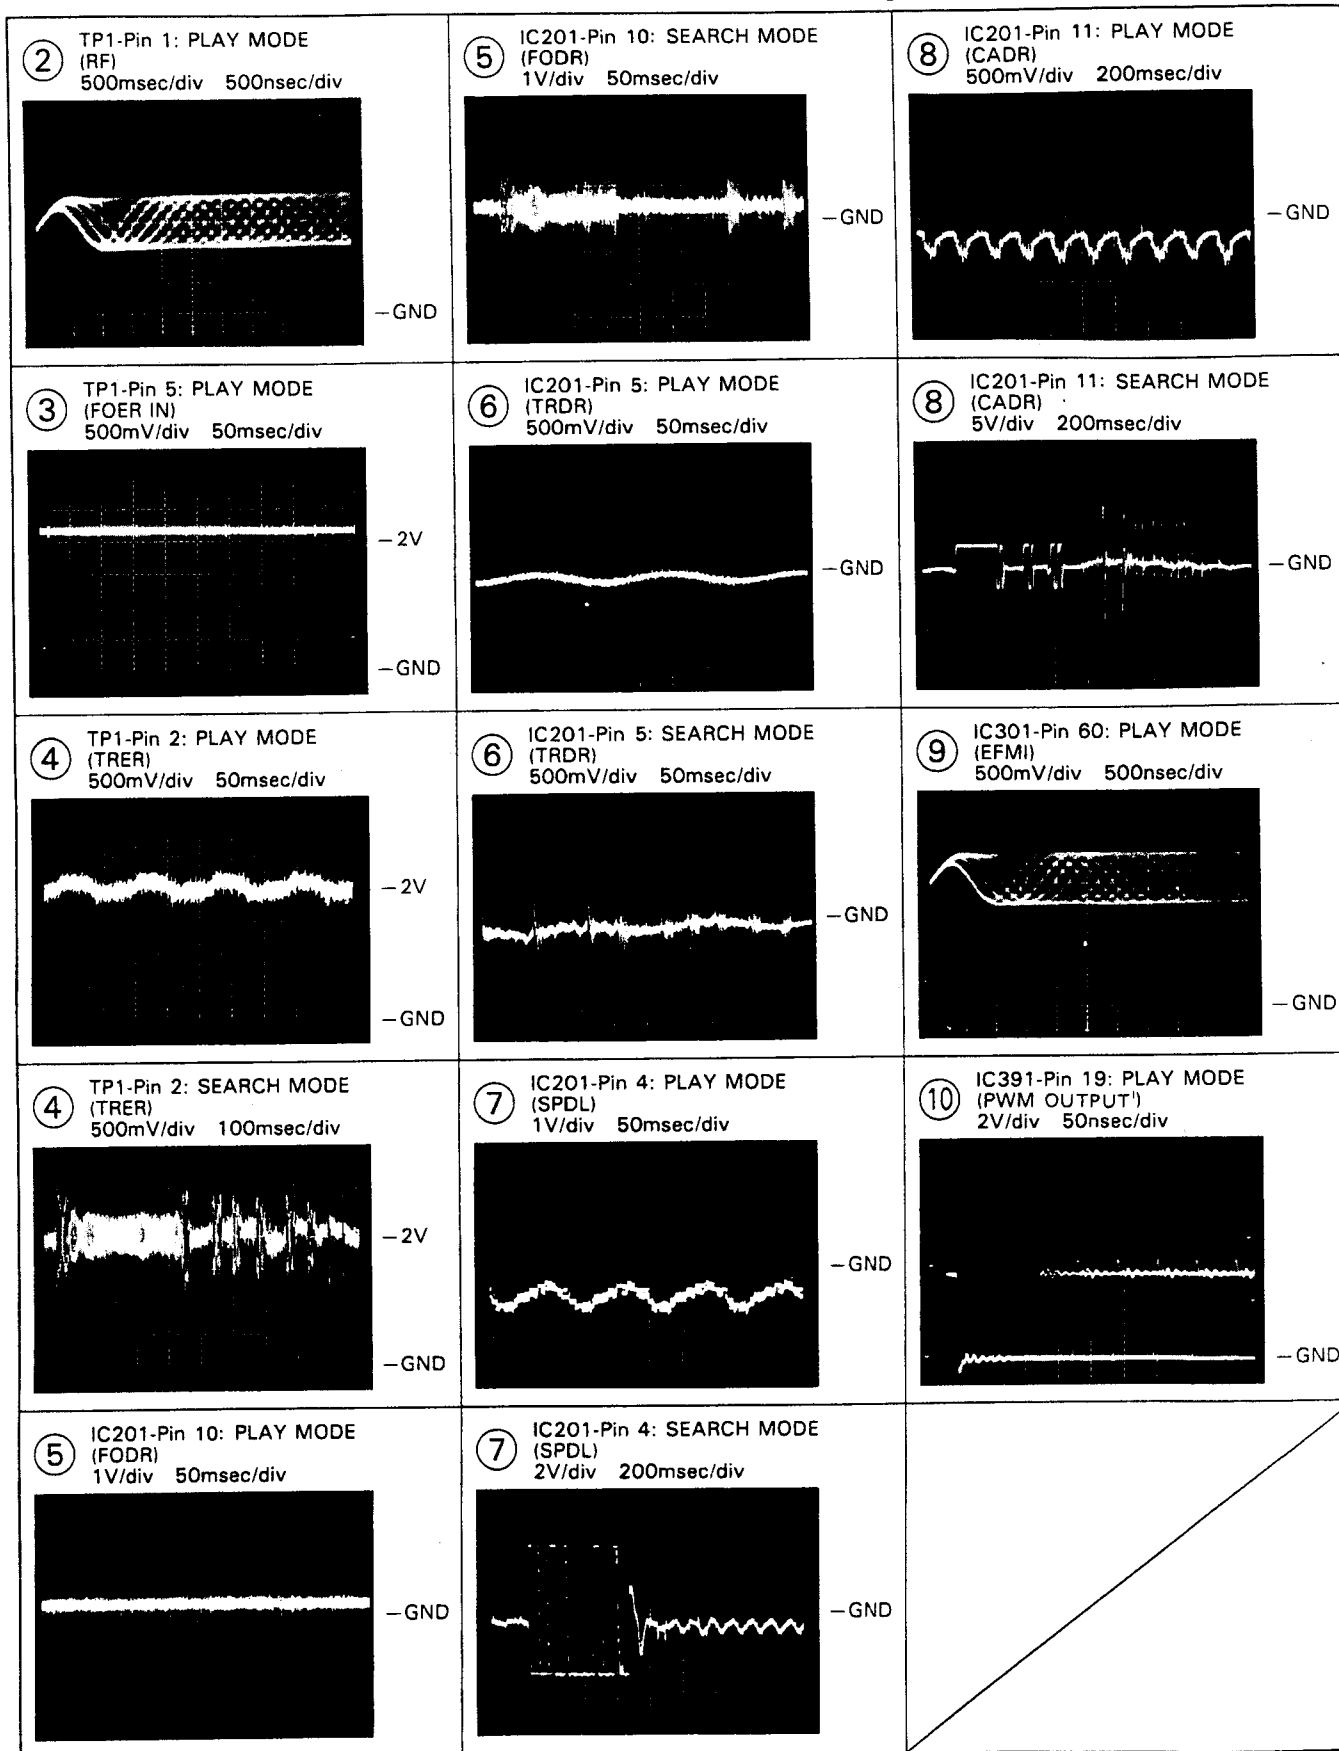

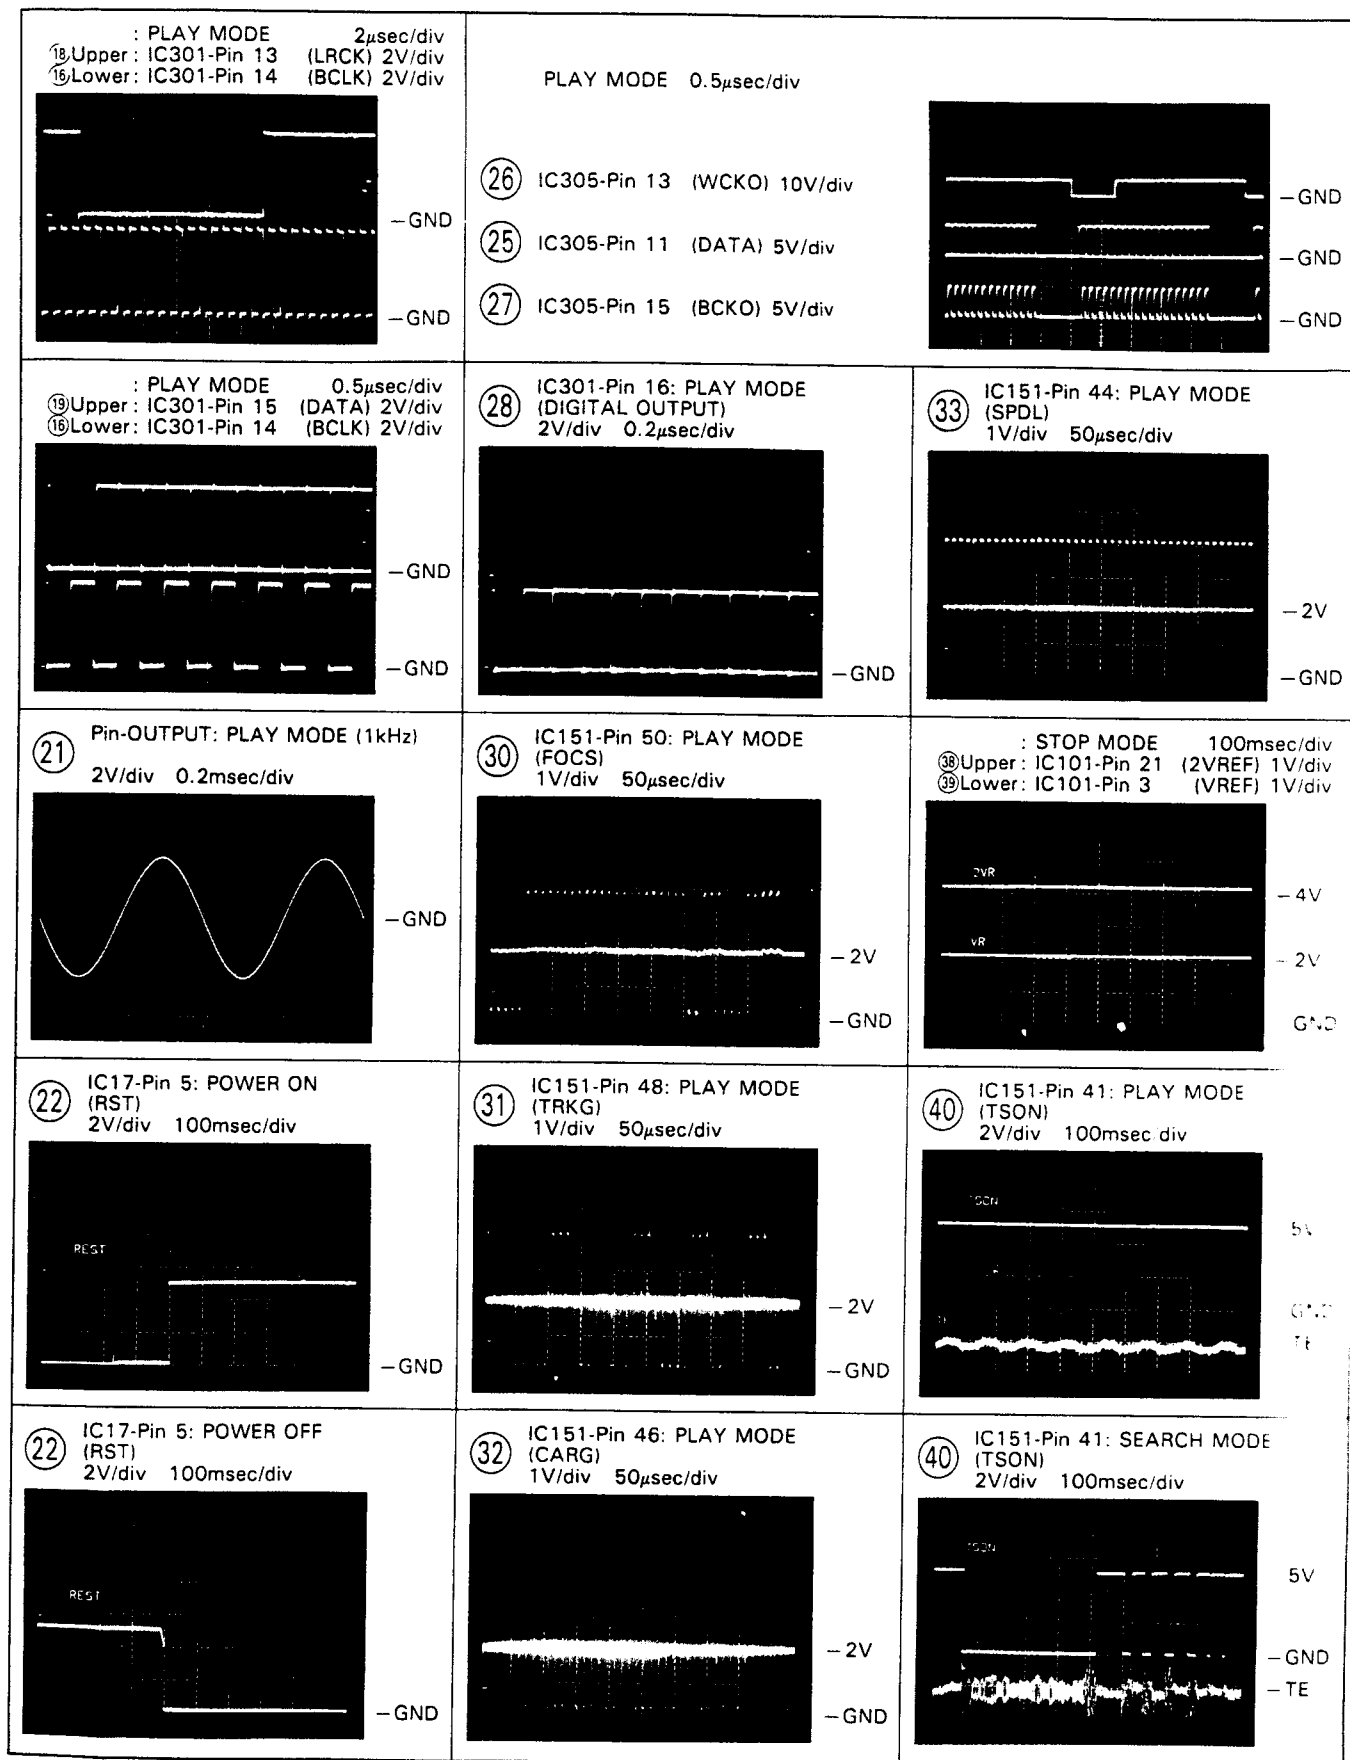

For PD-7500/KU and PD-6500/KU types)

Mark	No.	Part No.	Description
	1	PDE-319	Control cord
	2	PDE1001	Connection cord
	3	PRB1127	Operating instructions (English)
	4	PWW1051	Remote control unit
		PZN1008	Battery cover (For remote control unit)
	5	PHA1134	Protector F
	6	PHA1135	Protector R
	7	PHG1497	CD packing case (For PD-7500/KU type)
	7	PHG1499	CD packing case (For PD-6500/KU type)

15	2.5	31	3.9	47	4.6		
16	8.1	32	2.5	48	0		

NOTE:
1. RESISTORS:
Indicated in Ω , 1/8W & 1/4W, $\pm 5\%$ tolerance unless otherwise noted k; $k\Omega$, M; M Ω , (F); $\pm 1\%$, (G); $\pm 2\%$, (K); $\pm 10\%$, (M); $\pm 20\%$ tolerance

2. CAPACITORS:
Indicated in capacity (μF)/voltage (V) unless otherwise noted p; pF. Indication without voltage is 50V except electrolytic capacitor.

3. VOLTAGE, CURRENT:
□: DC voltage (V) at no input signal
Value in () is DC voltage in play state.
mA: DC current at no input signal value in () is DC current in play state.

4. OTHERS:
●: Signal route.
⊙: Adjusting point.
The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
* marked capacitors and resistors have parts numbers.
The underlined indicates the switch position.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

5. P.C. B's PARTS LIST

NOTES:

- Parts without part number cannot be supplied.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560Ω 56×10 1→56J.....RD1/4PS000J

47kΩ 47×10 3→473.....RD1/4PS000J

0.5Ω 0R5.....RN2H000K

1Ω 010.....RS1P000K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ 563×10 1→562J.....RN1/4R0000F

6. ADJUSTMENTS

Adjustments

A compact disc player, though free from any defect in a pickup or circuitry, may develop malfunction if adjustment is wrong or incomplete, and may become totally inoperative in extreme cases. Correct adjustment according to the adjustment procedure is therefore mandatory.

● Adjustment/confirmation items and sequence

Sequence	Item	Test point	Adjustment point
1	Focus lock and spindle lock check	TP 1, Pin 1 (RF)	—
2	Tracking gain and tracking balance auto adjustment check	TP 1, Pin 2 (TRK. ERR)	—
3	Grating adjustment	TP 1, Pin 2 (TRK. ERR)	Grating adjustment slit
4	Pickup radial/ tangential inclination adjustment	TP 1, Pin 1 (RF)	Radial inclination adjustment screw Tangential inclination adjustment screw
5	RF level adjustment	TP 1, Pin 1 (RF)	VR1 (RF level)
6	RF offset adjustment	TP 3 (RFAV)	VR101 (RF OFS)
7	Focus error signal check	TP 1, Pin 6 (FCS. ERR)	—

● Measuring equipment/jigs and tools

1. Dual trace oscilloscope, with a 10:1 probe
2. Test disc (YEDS-7)
3. 12 cm disc (with sound recorded for about 70 minutes or more)
4. Low-pass filter (39 k Ω + 0.001 μ F)
5. Hex wrench (M 3 mm)
6. Standard tools

● Positions of test point and adjustment potentiometers

Fig. 1 Adjustment points

● Cautions

1. Use the 10:1 probe for the oscilloscope.
2. The knob position (set value) of the oscilloscope described in the adjustment procedure is for a condition that the 10:1 probe is used.

● Test mode

This model is provided with a test mode to facilitate easy adjustment and confirmation necessary during servicing. When this is in the test mode, keys on a front panel function differently from a case of normal operation. Operation of these keys according to the correct procedure enables adjustments and confirmations. All adjustments of this model are performed in the test mode.

[Setting the test mode]

Set the test mode as follows:

1. Turn off the power switch.
2. Press the S351 and while holding it turn on the power switch.
3. Turn on the power switch and release the S351.

With the test mode, the display becomes completely different from that when the power switch is turned on for normal operation. Repeat steps 1 through 3 when the display is for normal operation because it means that the test mode has not been set correctly.

[Releasing the test mode]

Release the test mode as follows:

1. Press the STOP key to stop operation entirely.
2. Turn off the power switch on the front panel.

[Key functions in the test mode]

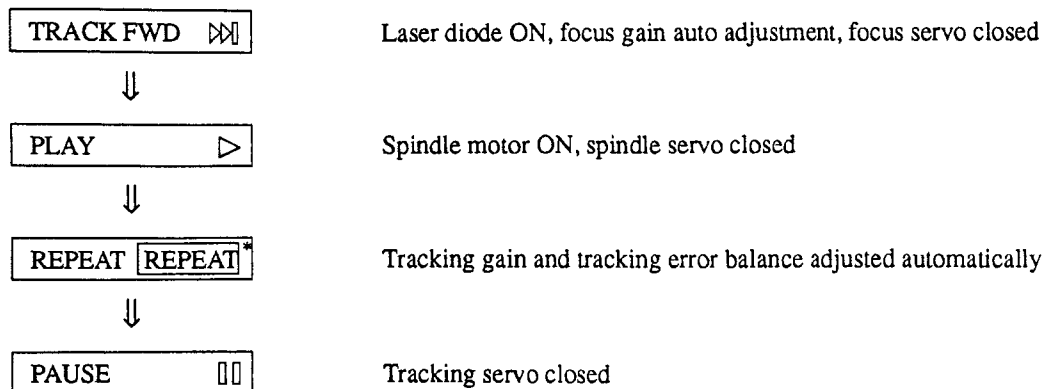

Symbol	Key name	Function in test mode	Description
	TRACK FWD	Focus servo close and focus gain auto adjustment.	Turns on the laser diode. Kicks the disc slightly and lower the focus actuator. Then raise it slowly for automatic adjustment of focus gain. Then, the key closes the focus servo when an objective lens is focused to a disc. Turn the disc, which is stationary in this state, lightly with a finger. Operating sound of the focus servo can be heard. This sound indicates that the focus servo is operating correctly. Pressing this key without loading a disc causes the laser diode to go ON, then causes kicking of a spindle motor slightly. The focus actuator is lowered, then raised and lowered three times, and finally returned to an original position. This operation is made twice.
	PLAY	Spindle servo close	Drives the spindle motor clockwise and puts the spindle servo into a closed loop when the disc rotation reaches a specified speed (about 500 rpm on an internal periphery). Note that the spindle motor does not run unless the focus servo is closed.
	REPEAT	Tracking gain and tracking error balance auto adjustment	Measures the level of error waveform when tracking is open for auto adjustment of tracking gain and tracking error balance. CAUTION: Once TRACK FWD and PLAY keys have been pressed, automatic adjustment of tracking gain and tracking error balance in the test mode is executed each time the REPEAT key is pressed. However, if initial automatic adjustment has been completed, no correct adjustment is obtained even when the second automatic adjustment is attempted. Accordingly, before pressing the REPEAT key, confirm that each adjustment is the first attempt after entry into the test mode. When the play state in the test mode has been stopped by pressing the STOP key, press the OPEN/CLOSE key to open the tray once and close it again, then proceed with automatic adjustment. Another method is to turn OFF power switch once and subsequently to enter the test mode again.

Symbol	Key name	Function in test mode	Description
⏸	PAUSE	Tracking servo close/open	<p>When focus servo and spindle servo are correctly in a closed loop and the tracking gain balance has been automatically adjusted, pressing this key causes the tracking servo into a closed loop. The track number current play and time elapsed are indicated on the front panel and the play signal is output.</p> <p>Failures of time indication, of regular counting, or of correct play of the sound may be possibly due to a peripheral portion of disc without sound or faulty adjustment or other defects. This key is of a toggle type, which causes open/close of the tracking servo each time it is pressed.</p> <p>No change occurs when this key is pressed without loading of the disc.</p>
⏮	MANUAL SEARCH REV	Carriage reverse (moves inward)	<p>Moves the pickup inward of the disc.</p> <p>Pressing this key when the tracking servo is in a closed loop causes the tracking servo into an open loop automatically. Key operation must be made with care in the test mode because the motor does not stop automatically even when the pickup reaches the mechanical end point.</p>
⏭	MANUAL SEARCH FWD	Carriage forward (moves outward)	<p>Moves the pickup outward of the disc.</p> <p>Pressing this key when the tracking servo is in a closed loop causes the tracking servo into an open loop automatically. Key operation must be made with care in the test mode because the motor does not stop automatically even when the pickup reaches the mechanical end point.</p>
□	STOP	Stop	<p>Stops all servos and causes initialization.</p> <p>Note that the pickup remains in a position when the STOP key is pressed.</p>
⏏	OPEN/CLOSE	Disc tray open/close	<p>Opens/closes the disc tray.</p> <p>This key is of a toggle type, which causes open/close of the disc tray each time it is pressed.</p> <p>Note that pressing this key while the disc is rotating causes the disc tray to open after stop of the disc.</p> <p>This key operation does not displace the pickup position.</p>

[Disc play method in the test mode]

Since each servo operates independently in the test mode, it is necessary for playing of the disc to close servos sequentially by operating keys according to the correct sequence.

Keys are operated in the following sequence for playing of the disc:

Operate each key in an interval of two to three seconds or more. Note that offset adjustment is made automatically when power supply is turned ON.

CAUTION:

- Press the

REPEAT*

 key only once (do not press it twice).

* : see page 46.

1. Focus Lock and Spindle Lock Check

• Purpose	Confirmation that auto adjustment of focus gain has been made and the spindle locked		
• Connection of measuring instruments	Connect the oscilloscope to TP1, Pin1 (RF). [Setting] 5 V/div 100 mSec/div DC mode	• Disc used	12 cm disc
[Procedure] <ol style="list-style-type: none"> 1. Move the pickup toward a center of the disc by the MANUAL SEARCH FWD key (⏩) (Note: Be sure to perform this operation.) 2. Check 1 pin RF (RF output) of TP1 with the oscilloscope to see if the RF signal is output when the TRACK FWD (⏩) key is pressed. 3. Press the PLAY key (▶) and check if the disc rotates in a normal direction (clockwise) approximately at a given speed (about 300 rpm near the center of disc) without overrun and reversing. 			

2. Tracking Gain and Tracking Error Balance Auto Adjustment Check

• Purpose	Confirmation that auto adjustment of tracking gain and tracking error balance have been completed.		
• Connection of measuring instruments	Connect the oscilloscope to TP1, Pin 2 (TRK ERR). (Connection may be made via a low-pass filter.) [Setting] 50 mV/div 5 mSec/div DC mode	• Player state	Test mode, focus and spindle servo closed, and tracking servo open
		• Disc used	YEDS-7

[Procedure]

CAUTION:

- Before this adjustment, press the OPEN/CLOSE key to open the tray and close it again.
1. Adjust DC offset of the oscilloscope so that a bright line comes to a center of the oscilloscope.
 2. Move the pickup to a center (R = 35 mm) of the disc with the MANUAL SEARCH FWD \gg or \ll key.
 3. Press TRACK FWD \gg and PLAY \triangleright keys sequentially to close focus and spindle servos.
 4. Press the repeat key **REPEAT*** to check if the DC component of the tracking error waveform is eliminated ($A = B$).

CAUTION:

- Press the **REPEAT*** key only once (do not press it twice).

* : see page 46.

3. Grating Adjustment

• Purpose	Matching of two laser beam spots for tracking error generation onto the track at an optimum angle.		
• Symptom in case of misadjustment	Play not started, with failure of track search and track skipping.		
• Connection of measuring instruments	Connect the oscilloscope to TP1, Pin2 (TRK ERR) via a low-pass filter. (See Fig. 2)	• Player state	Test mode, focus and spindle servo closed, tracking gain/balance automatically adjusted, tracking servo open
	[Setting] 50 mV/div 5 mSec/div DC mode	• Adjusting point	Slit for adjustment of grating of pickup
		• Disc used	12 cm disc (YEDS-7 not to be used)

[Procedure]

1. Move the pickup outward of the disc by the MANUAL SEARCH FWD \gg key or \ll key. This is to move the grating adjustment slit to the outward portion of the disc for adjustment.
2. Press the TRACK FWD \gg key and PLAY \triangleright key sequentially to close focus and spindle servos.
3. Insert a standard (–) screwdriver into the grating adjustment slit and adjust grating to find the null point. (Details are given in a next page.)
4. Turn the screwdriver slowly counterclockwise from the null point. The amplitude of waveform increases gradually, then decreases again when the screwdriver is turned further. Set grating to a point where the amplitude of waveform becomes maximum initially during counterclockwise turn of the screwdriver from the null point.

Reference : The angle of tracking beam to a track and the waveform can be related as shown in Fig. 3.

Caution : The amplitude of tracking error signal is about 1.2 Vp-p (when LPF of $39\text{ k}\Omega + 0.001\text{ }\mu\text{F}$ is used). When this amplitude is extremely small (0.8 Vp-p), either the objective lens is contaminated or the pickup may be faulty. Repeat adjustment when the difference in amplitude of error signals between inward and outward portions of the disc is 10% or more because adjustment has not been made to the optimum point.

5. Return the pickup to near the center of the disc once by the MANUAL SEARCH REV \ll key, and press the repeat key **REPEAT** for automatic adjustment of tracking gain and tracking error balance. Then, press the PAUSE $\square\square$ key to see if the track number and time elapsed are indicated on the front panel. If they are not indicated or the time elapsed changes irregularly, recheck the null point and repeat adjustment of grating. For readjustment of grating, press the OPEN/CLOSE \triangle key first to open, then to close the tray beforehand.

Fig. 2

Adjustment point

[How to find the null point]

Insert a (-) screwdriver into a grating adjustment slit to change the grating angle. In this state, the amplitude of tracking error signal on TP1, Pin2 changes. Within the grating variable range, there are five to six points where the amplitude of waveform decreases. In this waveform, there is only one point where an envelope becomes smooth. This point corresponds to a state in which three laser beams divided with grating are directly above the same track. (See Fig. 3)

This point is called a null point. Adjust grating to find out this null point and use this point as a reference position for grating adjustment.

Fig. 3

4. Pickup Tangential/Radial Inclination Adjustment

• Purpose	Adjustment of an angle of pickup to the disc to achieve vertical irradiation of laser beam onto the disc, thereby ensuring reading of optimum RF signal.		
• Symptom in case of misadjustment	Sound missing, failure of play depending on a disc.		
• Connection of measuring instruments	Connect the oscilloscope to TP1, Pin1 (RF) [Setting] 20 mV/div 200 nSec/div AC mode	• Player state • Adjusting point • Disc used	Test mode, play state Pickup radial inclination adjustment screw, Pickup tangential inclination adjustment screw 12 cm disc (YEDS-7 not to be used)

[Procedure]

1. Move the pickup outward of the disc by the MANUAL SEARCH FWD \gg key to enable adjustment with the radial/tracking inclination adjustment screw. Press the TRACK FWD \gg key, PLAY \triangleright key, REPEAT REPEAT* key, and PAUSE $\square\square$ key sequentially to close focus, spindle, and tracking servos to enter the play state.
2. Adjust first the radial inclination adjustment screw with a hex wrench (M 3 mm) until the sharpest possible eye pattern (a diamond waveform appearing in a center of RF signal) is obtained.
3. Then, adjust the tangential inclination adjustment screw with a hex wrench (M 3 mm) until the sharpest possible eye pattern is obtained. (Fig. 5)
4. Repeat adjustment of radial inclination adjustment screw, then tangential inclination adjustment screw in this order until the sharpest possible eye pattern is obtained. Adjust two screws alternately as required until the eye pattern becomes most sharp.

Caution : Radial and tangential directions are respectively as shown in Fig. 4 when viewed toward the disc.

Fig. 4

* : see page 46.

Fig. 5 Eye pattern

5. RF Level Adjustment

• Purpose	Optimization of the amplitude of play RF signal		
• Symptom in case of misadjustment	No play, no search		
• Connection of measuring instruments	Connect oscilloscope to TP1, Pin1 (RF). [Setting] 50 mV/div 10 mSec/div AC mode	• Player state • Adjusting point • Disc used	Test mode, play state VR1 (laser power) YEDS-7
<p>[Procedure]</p> <p>CAUTION:</p> <ul style="list-style-type: none"> • Before this adjustment, press the OPEN/CLOSE key to open the tray and close it again. • Press the REPEAT* key only once (do not press it twice). <ol style="list-style-type: none"> 1. Move the pickup to a center (R = 35 mm) of the disc by the MANUAL SEARCH FWD ⏮ key or ⏭ key. Press the TRACK FWD ⏮ key, PLAY ▶ key, REPEAT REPEAT* key, and PAUSE ⏸ key sequentially to close each servo to enter the play state. 2. Adjust the amplitude of RF signal to 0.9 Vp-p ± 0.07 V by VR1 (laser power). 			

* : see page 46.

6. RF Offset Adjustment

• Purpose	Adjustment of RF signal offset		
• Connection of measuring instruments	Connect the oscilloscope to TP3 (RFAV).	• Player state	Test mode, play state
	[Setting] 50 mV/div 10 mSec/div DC mode	• Adjusting point	VR101 (RF, OFS)
		• Disc used	YEDS-7

[Procedure]

CAUTION:

- Before this adjustment, press the OPEN/CLOSE key to open the tray and close it again.
 - Press the **REPEAT*** key only once (do not press it twice).
1. Move the pickup to a center (R = 35 mm) of the disc by the MANUAL SEARCH FWD **⏮** key or **⏭** key. Press the TRACK FWD **⏮** key, PLAY **▶** key, REPEAT **REPEAT*** key, and PAUSE **⏸** key sequentially to close each servo.
 2. Adjust the DC voltage of TP3 (RFAV) to $1.5 \text{ V} \pm 50 \text{ mV}$ by VR101 (RF, OFS).

Note : As RFAV indicates the mean value of RF signal, the RFAV waveform may vary in a damaged disc. In this case, adjustment should be made in a portion free of damage.

* : see page 46.

7. Focus Error Signal (Focus S Curve) Check

• Purpose	Observation of the focus error signal to judge appropriateness of the pickup. This judgment of the pickup is made by checking the magnitude of the tracking error signal amplitude (see the item describing the tracking error balance adjustment) and this focus error signal waveform.		
• Connection of measuring instruments	Connect the oscilloscope to TP1, Pin6 (FOCS ERR).	• Player state	Test mode, stop state
	[Setting] 100 mV/div 5 mSec/div DC mode	• Adjusting point	None
		• Disc used	YEDS-7

[Procedure]

1. Connect TP1, Pin5 to VR (TP1, Pin7).
2. Load a disc.
3. When the TRACK FWD $\blacktriangleright\blacktriangleleft$ key is pressed while observing the oscilloscope screen, the waveform shown in Fig. 8 can be observed instantaneously. Confirm that the amplitude in this state is 1.3 Vp-p or more and that the amplitude is nearly equal on positive and negative sides. Since the waveform appears only instantaneously when the TRACK FWD $\blacktriangleright\blacktriangleleft$ key is pressed, repeat pressing this key until confirmation of the waveform is completed.

Fig. 8

[Pickup appropriateness judgment]

This judgment should be made after completion of correct adjustments. The pickup may be faulty in following cases:

Extremely small amplitude (0.7 Vp-p or less) of the tracking error signal

Extremely small amplitude (0.8 Vp-p or less) of the focus error signal

Extremely asymmetrical amplitudes on positive and negative sides of the focus error signal (2:1 or more)

Small RF signal (0.7 Vp-p or less). The standard value is not reached even after adjustment of VR1 (laser power)

7. IC INFORMATION

TA8137N (RF Amplifier)

The TA8137N is an IC that was developed to produce a 3-beam type of pickup focus signal and tracking error signal for CD players.

When used in combination with the TC9220F-002 (digital servo processor), servo systems can be created with fewer, externally connected parts.

- It is equipped with an internal on-track data and defect detection RFAV amplifier.
- Automatic adjustment of the tracking error balance can be performed when used together with the TC9220F-002.
- It is also equipped with an internal ALPC (Auto Laser Power Control) circuit.
- Operation is possible with a single-phase, 5V power supply.
- Low power consumption is another attractive feature.
- This IC is supplied in a shrink DIP24 pin chip.

• Pin Functions (TA8137N)

Pin	Pin Name	I/O	Function
1	FIP	I	Main beam I-V amplifier, 1, 2 input pin
2	FIN		
3	VR	O	Reference voltage output pin (2V)
4	TIP	I	Sub-beam I-V amplifier 1, 2 input pin
5	TIN		
6	PDI		Photo diode amplifier input pin

18	FEB		Focus error balance adjustment input pin
19	RFAV	O	RF average amplifier output pin
20	RFL	I	RF average amplifier positive phase input pin
21	2VR	O	Double reference voltage output pin (4V)
22	RFO		RF amplifier output pin
23	RFN	I	RF amplifier negative phase input pin
24	Vcc	—	Power supply pin (5V)

TC9220F-022

(Digital Servo Processor)

The TC9220F-002 is a CMOS LSI that was developed for CD player digital servo control.

Simply configured CD player systems can be realized with high-performance functions by combining TA8137N (bipolar IC) and the data processor TC9221F (CMOS LSI) as servo IC's.

- Totally digital servo systems are used to enable a reduction in the total number of parts.
- The chip contains an internal digital equalizer for phase compensation operations.
It is equipped with an internal coefficient used for phase compensation that corresponds to each type of pickup.
- It also contains an internal PWM driver (4-channel).

• Pin Functions (TC9220F-002)

Pin	Pin Name	I/O	Function
1	VR	—	Reference power supply voltage pin (2V)
2	AVDD	—	Analog power supply voltage pin
3	RFAV	I	RF average value signal input pin
4	FEI	I	Focus error signal input pin
5	TEI	I	Tracking error signal input pin
6	VDI	I	Battery potential fall detection pin
7	TEZI	I	Tracking error zero cross input pin
8	AVSS	—	Analog ground pin
9	2VR	—	Reference power voltage pin (4V)

25	RSTO	O	Reset output pin
26	4MCK	I	4M clock input pin
27	SMUT	O	Soft mute output pin
28	AMUT	O	Analog mute output pin
29	EPDA	O	Processor internal status output pin
30	COFS	O	Correction system frame synchronized clock output pin.

- The focus, tracking loop gain and offset are adjusted automatically.
- The tracking error balance is also adjusted automatically.
- An abnormality detection circuit which operates during play and search operations is contained internally.
- High-speed searches can be performed by using the search speed control circuit.

Pin	Pin Name	I/O	Function
31	PFCK	O	Playback system frame synchronized clock output pin.
32	SBOK	O	Sub-code signal Q data CRC check judgement result output pin
33	SUBQ	O	Sub-code signal Q data output pin
34	SBSY	O	Sub-code synchronization signal output pin
35	DXCK	O	2M clock output pin
36	EXDM	I	Disc mode PWM data external setting pin
37	KEN	I	Key enable input pin
38	GUP	O	Gain-up signal output pin
39	DFCT	O	Defect detection pin
40	SRCH	O	Search signal output pin
41	TSO	O	Tracking servo ON signal output pin
42	OUT0	O	General purpose output port
43	OUT1	O	
44	DMOA	O	
45	DMOB	O	Disc motor control PWM output pin
46	FDOA	O	Feed motor control PWM output pin
47	FDOB	O	
48	TROA	O	Tracking coil control PWM output pin
49	TROB	O	
50	FOOA	O	Focus coil control PWM output pin
51	FOOB	O	
52	2VR	—	Reference power supply voltage pin (4V)
53	VDD	—	Power supply voltage pin
54	VSS	—	Ground pin
55	CONT0	I	Control (for test use) input pin Normally used as "H" or open.
56	CONT1	I	
57	TEST0	I	Test pins. Normally used as "H" or open.
58	TEST1	I	
59	TEST2	I	
60	TEST3	I	

TC9221F (Data Processor)

The TC9221F is a CMOS LSI that was developed for simultaneous separation, EFM signal demodulation, error detection and correction processing for compact disc players. High performance and simply configured CD player systems can be realized by the combination of the servo IC TA8137N (bipolar IC) and servo processor TC9220F-002 (CMOS LSI).

- Synchronized pattern detection and synchronized signal protection and insertion operation can be realized.
- An analog PLL circuit and VCO are contained internally.
- A disc motor control circuit is also contained internally.
- The TC9221F is equipped with an internal microcomputer interface circuit that contains a total of six components including four bus lines, a clock line and a chip select which enables total data processing.

- A CIRC correction logic system is employed which performs double correction for C1 and triple correction for C2. (12 frame burst errors are completely corrected.)
- A 16K-SRAM or 256K-DRAM chip is used for signal processing.
- Digital out and CDROM format signals are externally output.
- There is also an internal sub-code signal demodulation circuit.
- A 2-block buffer RAM for sub-code Q data is contained internally and can be read freely.

● Pin Functions (TC9221F)

Pin	Pin Name	I/O	Function
1	SCLO	I	Data slice comparator level setting pin
2	VR	—	Reference power voltage pin (2V)
3	2VR		Reference power voltage pin (4V)
4	LPFO	O	Low-pass filter amplifier output pin
5	LPFN	I	Low-pass filter amplifier negative input pin
6	TMAX	O	PLL frequency control signal output pin
7	PD		PLL phase error signal output pin
8	CLKC	I	Sub-code data read clock input pin
9	DATA	O	Sub-code data output pin
10	SFSY		Sub-code frame synchronization signal output pin
11	SBSY		Sub-code synchronization output pin
12	EMPA		Emphasis output pin
13	LRCK		LR clock output pin
14	BCK		Bit clock output pin
15	AOUT		Audio data output pin
16	DOUT		Digital out output pin
17	56MK		5.6M clock output pin
18	CSIN	I	Digital out C bit data input pin
19	AD0	O	External RAM address signal output pin
20	AD1		
21	AD2		
22	VSS	—	Ground pin
23	VDD		Power supply voltage pin
24	AD3	O	External RAM address signal output pin
25	AD4		
26	AD5		
27	AD6		
28	AD7		
29	AD8		
30	AD9		
31	R/W	O	External RAM read/write signal output pin

Pin	Pin Name	I/O	Function
32	\overline{CE}	O	External RAM chip enable signal output pin
33	AD10		External RAM address signal output pin
34	MD87	I/O	External RAM data bus lines
35	MD86		
36	MD85		
37	MD84		
38	MD83		
39	MD82		
40	MD81		
41	MD80		
42	X'PD	O	VCXO control output pin
43	XI	I	The quartz crystal oscillator connection pins connect the quartz crystal oscillator and generate the required system clock. Crystal = 16.9344 MHz
44	XO	O	
45	\overline{CCE}	I	Command and data transmission/reception chip enable pin
46	BUCK	I	Command and data transmission/reception clock input pin
47	BUS0	I/O	Command and data transmission/reception bus lines
48	BUS1		
49	BUS2		
50	BUS3		
51	4MCK	O	4M clock output pin
52	\overline{RST}	I	Reset input pin
53	VDD	—	Power supply voltage pin
54	VSS		Ground pin
55	MCK	O	Master clock output pin
56	PSD		Processor serial data output pin
57	SSD	I	Servo serial data input pin
58	PREB	O	Preamble output pin (7.35 kHz/32)
59	TEST	I	Test pin, normally used as "H" or open
60	EFMI		EFM signal input pin

SM5840AP (8 TIMES OVER SAMPLING DIGITAL FILTER)

• Pin Functions

Pin	Pin Name	I/O	Function
1	CKSL	ip **	Selection of oscillation and input frequency. (384fs at CKSL = "H")* (256fs at CKSL = "L")*
2	XTI	I	Oscillating circuit input (Frequency is selected by CKSL).
3	XTO	O	Oscillating circuit output
4	CKO		Oscillating circuit output clock (Frequency is same as XTI pin).
5	VSS	—	GND
6	MDT	ip **	Mode set data
7	MCK		Mode set clock
8	MLE		Mode set latch enable
9	RST		System reset (initialize)

*: fs means sample frequency of the input data.

** : ip is input pins with pull-up resistor. Therefore, don't mind that pins are opened at setting the B level.

Pin	Pin Name	I/O	Function
10	DG	O	Deglitch output at 8fs LR parallel output mode.* Deglitch output at 4fs LR mutual output mode.*
11	DOR		R ch data output at 8fs LR parallel output mode.* LR clock output at 4fs LR mutual output mode.*
12	DOL		L ch data output at 8fs LR parallel output mode.* L ch/R ch data output at 4fs LR mutual output mode.*
13	WCKO		Word clock output
14	VDD	—	+5V power supply
15	BCKO	O	Bit clock output
16	LRCI	ip **	Sample rate (fs) clock of input data.*
17	BCKI		Bit clock input
18	DIN		Data input

Note: • The indication "fs" in the explanation indicates the original signal (digitally recorded data) sampling frequency.
• The pins indicated in the I/O column use the IC internal preamplifier. Consequently, they cannot be opened by H level fixed input.

PD7007 (D/A CONVERTER)

Pin Explanation

Pin Number	Pin Name	I/O	Function
1	DINL	ip	Left channel serial data input
2	DINR	ip	Right channel serial data input
3	BCKI	ip	Serial input data bit clock (reads data on rising edge)
4	LRCI	ip	Input data sample frequency clock
5	IW18	ip	Input data word word-length selection H (or open) 18 bit length L 16 bit length
6	IPARA	ip	Input data word timing selection H (or open) L ch/R ch (parallel) L L ch/R ch (mutual)
7	IISN	ip	I ² S input mode selection H (or open) Normal input mode L I ² S input mode
8	X8FS	ip	Input data sampling frequency selection H 8*fs input mode L 4*fs input mode
9	DVSS	—	Digital unit GND
10	DVDD	—	Digital unit power supply
11	AVDD1	—	Analog unit power supply (5V) 1
12	ROAN	O	Data output PWM output (right channel A negative phase)
13	AVSS1	—	Analog unit GND 1
14	AVSS2	—	Analog unit GND 2
15	ROA	O	Data output PWM output (right channel A positive phase)
16	AVDD2	—	Analog unit power supply (5V) 2
17	AVDD3	—	Analog unit power supply (5V) 3
18	ROB	O	Data output PWM output (right channel B positive phase)
19	ROBN	O	Data output PWM output (right channel B negative phase)
20	AVSS3	—	Analog unit GND 3
21	AVSS4	—	Analog unit GND 4
22	LOBN	O	Data output PWM output (left channel B negative phase)
23	LOB	O	Data output PWM output (left channel B positive phase)
24	AVDD4	—	Analog unit power supply (5V) 4
25	AVDD5	—	Analog unit power supply (5V) 5
26	LOA	O	Data output PWM output (left channel A positive phase)
27	AVSS5	—	Analog unit GND 5
28	AVSS6	—	Analog unit GND 6
29	LOANM	O	Data output PWM output (left channel A negative phase)
30	AVDD6	—	Analog unit power supply (5V) 6
31	XVDD	—	Clock power supply (5V)
32	XVSS	—	Clock GND
33	XTI	i	Crystal connection pin/external clock input pin
34	XTO	O	Crystal connection pin
35	MUTEO	O	Muting output
36	MOD3	ip	System clock input frequency and noise cycle operation frequency combination selection
37	MOD2	ip	
38	MOD1	ip	
39	CKO	O	256fs/384fs clock output
40	RSTN	ip	Reset input (active on L level)

Note: ● The indication "fs" in the explanation indicates the original signal (digitally recorded data) sampling frequency.
 ● The pins indicated in the I/O column use the IC internal preamplifier.
 Consequently, they cannot be opened by H level fixed input.

8. FOR PD-7500/KC, HEM, HB, HPW, SD, PD-6500/KC, HEM, HB, HPW, SD AND PD-6500-S/HEWM TYPES

8.1 FOR PD-7500/KC, HEM, HB, HPW AND SD TYPES CONTRAST OF MISCELLANEOUS PARTS

NOTES:

- Parts without part number cannot be supplied.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

The PD-7500/KC, HEM, HB, HPW and SD types are the same as the PD-7500/KU type with the exception of the following sections.

Mark	Symbol & Description	Part No.					
		PD-7500/KU	PD-7500/KC	PD-7500/HEM	PD-7500/HB	PD-7500/HPW	PD-7500/SD

MAIN BOARD ASSEMBLY (PWZ1810)

The main board assembly (PWZ1810) is the same as the Main board assembly (PWZ1814) with the exception of the following sections.

Mark	Symbol & Description	Part No.		Remarks
		PWZ1814	PWZ1810	
	C329	CCCSL101J50	
	C330	CKCYF103Z50	
	D304-D307	1SS254	
	R320	RD1/6PM102J	
	R321	RD1/6PM244J	

HEADPHONE BOARD ASSEMBLY

The Headphone board assembly of PD-6500/KC, HEM, HB, HPW, SD and PD-6500-S/HEWM types are the same as that of PD-6500/KU type for the service supply parts.

TRANSFORMER BOARD ASSEMBLY

The Transformer board assembly of PD-6500/KC, HEM, HB, HPW, SD and PD-6500-S/HEWM types are the same as that of PD-6500/KU type for the service supply parts.

PRIMARY BOARD ASSEMBLY

The Primary board assembly of PD-6500/KC, HEM, HB, HPW, SD and PD-6500-S/HEWM types are the same as that of PD-6500/KU type for the service supply parts.

Line Voltage Selection (for HEM, HB, HPW and HEWM types)

• Line voltage can be changed with the following steps.

1. Disconnect the AC power cord.
2. Remove the bonnet case.
3. Change the connection wire from Power switch board assembly (Terminal NO. ③) to Transformer board assembly (Terminal NO. ① or ②) as follows.

Voltage	Terminal NO. of Transformer board assembly
220V	①
240V	②

4. Stick the line voltage label on the rear panel.

Description	Part No.
220V label	AAX-193
240V label	AAX-192

9. PANEL FACILITIES

FRONT PANEL

- ① **POWER switch**
Press to turn power ON and OFF. If the power is turned ON when a disc is already loaded, the player will automatically enter the play mode (timer start function).
- ② **Disc tray**
- ③ **DIMMER button**
- ④ **MANUAL SEARCH buttons (◀◀, ▶▶)**
- ⑤ **TRACK SEARCH buttons (◀◀, ▶▶)**
- ⑥ **HI-LITE SCAN button**
- ⑦ **Program button (PGM)**
- ⑧ **CHECK button**
- ⑨ **CLEAR button**
- ⑩ **TIME button**
- ⑪ **TRACK NUMBER buttons (1–20, >20)**
- ⑫ **AUTO FADER buttons (↗, ↘) (PD-7500 only)**
- ⑬ **INDEX SEARCH buttons (↖, ↗) (PD-7500 only)**
- ⑭ **OPEN/CLOSE button**
- ⑮ **STOP button (■)**
- ⑯ **PAUSE button/indicator (■)**
- ⑰ **PLAY button/indicator (▶)**
- ⑱ **RANDOM PLAY button**
- ⑲ **Program edit button (EDIT) (■ AUTO PGM/ ■■ COMPU PGM)**
- ⑳ **TIME FADE EDIT button**
- ㉑ **Remote sensor**
- ㉒ **AUTO SPACE button**
- ㉓ **Headphones jack (PHONES)**
- ㉔ **Headphones volume control (PHONES LEVEL)**
- ㉕ **REPEAT button**

REMOTE CONTROL UNIT

Buttons listed here but not accompanied with explanations have the same functions as the corresponding front-panel buttons.

- ① **OPEN/CLOSE button**
- ② **Track number buttons (1–20, >20)**
- ③ **Program button (PGM)**
- ④ **CHECK button**
- ⑤ **REPEAT button**
- ⑥ **TIME button**
- ⑦ **STOP button (■)**
- ⑧ **PAUSE button (■)**
- ⑨ **FADE IN/OUT buttons (↗, ↘)**
- ⑩ **OUTPUT LEVEL buttons (–, +)**
- ⑪ **TIME FADE EDIT button**
- ⑫ **Program edit button (EDIT) (■ AUTO/ ■■ COMPU)**
- ⑬ **CLEAR button**
- ⑭ **Hi-lite scan button (HI-LITE SCAN)**
- ⑮ **RANDOM PLAY button**
- ⑯ **PLAY button (▶)**
- ⑰ **Track search buttons (TRACK ◀◀, ▶▶)**
- ⑱ **Index search buttons (INDEX ↖, ↗)**
- ⑲ **Manual search buttons (MANUAL ◀◀, ▶▶)**

10. CONNECTIONS

CONNECTING THE OUTPUT CABLE:

Connect the plugs on one end of the cable to your amplifier's input terminals (CD or AUX), and those on the other end to the output terminals on this CD player.

- When connecting the cord, insert the white plugs into the left (L) channel, and the red plugs to the right (R) channel.
- Be sure to connect all plugs fully into their terminals.
- Never connect the CD player to your amplifier's turntable (PHONO) terminals, since sound will be distorted and proper playback will not be possible.

CONNECTING THE POWER CORD:

Insert the power cord's plug into an accessory AC outlet on your amplifier, or into a normal household outlet.

CONNECTING THE OPTICAL FIBER CABLE:

NOTE:

- No sound may be produced if optical connections are made with an amplifier having different optical signal standards.
- Volume control is not possible when a digital output connector is used.

Handling precautions for the optical fiber cable (sold separately)

- Do not bend the cable at sharp angles. Doing so may damage the cable. When installing in a rack, take special care. When storing the cable for storage, coil with 5-15/16 in (15 cm) diameter or larger.
- When connecting, insert the plug fully. Avoid an incomplete connection.
- Use an optical fiber cable 10 feet (3 m) or less.
- Avoid the optical fiber cable plug being scratched or exposed to dust. If there is dust, wipe off with a soft cloth.
- When an optical fiber cable is not connected, place the dust cap on the optical terminal (OPTICAL).

REMOTE CONTROL AMPLIFIER OPERATION:

PD-7500 (U.S., Canadian and Australian models)

PD-6500 (U.S. and Canadian models)

If your amplifier features the mark, connect the accessory control cord between the Amplifier's CONTROL OUT terminal and the CD player's CONTROL IN terminal.

- You can then use the remote control unit furnished with your amplifier to perform PLAY, PAUSE, STOP and TRACK operations on the CD player.
- For details regarding connection and operation, consult the Operating Instructions accompanying your stereo amplifier.
- These terminals do not need to be connected if you do not intend to use this function.

NOTE:

- When the control cord is connected to the CONTROL IN terminal, the remote control unit cannot be used to control the player directly. The remote control unit must be pointed at the amplifier's remote sensor.
- Be sure to connect both of the control cord's plugs securely to the CONTROL IN and CONTROL OUT terminals. Do not connect only one end of the cable.
- When only the digital output is connected, the remote sensor of the amplifier does not function. To operate it, connect the output cable to the stereo amplifier as well as connecting the digital output.

About the CD-DECK SYNCHRO recording function:

- This function facilitates edit recording from CD to cassette tape when the CD player is connected to a Pioneer cassette deck equipped with a CD-DECK SYNCHRO terminal. For details, consult the Operating Instructions accompanying the cassette deck featuring the CD-DECK SYNCHRO mark.
- When only the digital output is connected, the CD-DECK SYNCHRO recording does not function. To operate it, connect the output cable to the stereo amplifier as well as connecting the digital output.

11. SPECIFICATIONS

1. General

Type	Compact disc digital audio system
Usable discs	Compact Disc
Power requirements	
U.K. and Australian models	AC 240V, 50/60Hz
European model	AC 220V, 50/60Hz
U.S. and Canadian models	AC 120V, 60Hz
Multi-voltage model	AC 110/120—127/220/240V (switchable) 50/60Hz
Power consumption	16W
Operating temperature	+ 5°C — + 35°C (+ 41°F — + 95°F)
Weight	4.3kg (9lb, 8oz)
External dimensions	420(W) × 326(D) × 106(H)mm 16-9/16(W) × 12-13/16(D) × 4-3/16(H) in.

2. Audio section

PD-7500:

Frequency response	2Hz—20kHz
S/N	108dB or more (EIAJ)
Dynamic range	96dB or more (EIAJ)
Channel separation	98dB or more (EIAJ)
Total harmonic distortion	0.0024% or less (EIAJ)
Output voltage	2.0V
Wow and flutter	Limit of measurement ($\pm 0.001\%$ W.PEAK) or less (EIAJ)
Number of channels	2 channels (stereo)

PD-6500:

Frequency response	2Hz—20kHz
S/N	106dB or more (EIAJ)
Dynamic range	96dB or more (EIAJ)
Channel separation	98dB or more (EIAJ)
Total harmonic distortion	0.0027% or less (EIAJ)
Output voltage	2.0V
Wow and flutter	Limit of measurement ($\pm 0.001\%$ W.PEAK) or less (EIAJ)
Number of channels	2 channels (stereo)

3. Output terminal

- Audio line output terminals
- CD-DECK SYNCHRO terminal
- Control input/output terminals
- PD-6500: U.S. and Canadian models only
- PD-7500: U.S., Canadian and Australian models only
- Headphone jack (with volume control)
- Optical digital output terminal

4. Functions

- Play
- Pause
- Stop
- Manual search
- Track search
- Index search (PD-6500: remote control only)
- Hi-lite scan (with auto fader)
- Direct selection
- Single track repeat
- All track repeat
- Programmed repeat
- Random play repeat
- Programmed random play repeat
- Programmed playback (up to 24 tracks)
- Pause program
- Program check
- Program correction
- Program clear
- Auto program edit
- Compu program edit
- Time fade edit (Fade time variable)
- One touch fade (Fade time variable)
(PD-6500: remote control only)
- Digital level control (Remote control only)
- Random play
- Programmed random play
- Auto space
- Dimmer
- Timer start
- CD-deck synchro

5. Accessories

- Remote control unit 1
- Size AAA/RO3 dry cell batteries 2
- Output cable 1
- Control cord 1
- PD-6500: U.S. and Canadian models
- PD-7500: U.S., Canadian and Australian models
- Operating instructions 1
